

Open Data v3, 2020 October 21st Release

We've made just one change in this release, but we think it's important.

Changes

- We've enabled CORS (https://en.wikipedia.org/wiki/Cross-origin_resource_sharing), with the following policy ("GET" from any Origin, with any headers, disallow credentials) for all endpoints with one exception. CORS will be enabled for all public Open Data v3 API endpoints going forward.
- The exception endpoint is "Account" endpoint. This endpoint does not have CORS enabled.

Other

The next immediate priorities are additional query options for the important dates endpoint, and content from the WCMS (<https://uwaterloo.ca>) system. This will include sites, news, events, blogs, and opportunities.

As always, if you encounter any issues, or have a question please use our GitHub repository to [open an issue](#).
